## HONORS FORUM COURSES Spring 2021

## ΑN

and places, students learn to recognize the importance of material objects in the social world and their own lives. How do objects help people define their identity, structure their lives, remember the past, and facilitate action? What personal and collective stories do objects tell? Do we control the objects around us, or do those objects control us? Among theorem objects studied in this course are sentimental objects, collectibles, memorials, protest art, and technologic." [The added to the course ID, AN346R, stands to students conduct a semelsted research projection a topic of their collection parallel with the class.]

and conquest. Students will work with primary and secondary sournces and develop their analytical and writing skills as they ask questions about the field of history itself. What assumptions have historians made when they focus on nations and continents? What institutions and categories have they privileged with their focus? What have we missed because we look only at the history of land? How and why does history's narrative shift when we undertake a "sea change" in our persperse: (Fulfills social sciences requirement.)

CS 275H.002906

Computer Science Research

1 Credit

M. Eckmann

T. O'Connell

A. Prasad

D. Read

C. Reilly

Time/Location TBA

An introductory exploration of research in computer science. The students, in collaboration with a faculty mentor, will participate in a research project in a particular area of computer science. The research projects may, for example, include designing new algorithms for computational problems, surveying the research literature, lementing existing algorithms from the research literature, or performing computational experimer students may only take four CS 275H courses in their careers and may take no more than two in any given semester. If two are taken in a single semester and must be a different section. CS 275H may not be counted toward the CS major. Must be taken S/U.
